REPEATED DOOR DAMAGE IS A LOT OF BULL

CORNELL

SAFE AND SECURE

Cornell's Matadoor® Break-away Curtain Section

Saves time and money by tolerating moving vehicle impact and resetting quickly.

HOW IT WORKS

Upon crash, the design of the bottom bar enables the force of the impact to be transferred to the fasteners which shear, allowing the bottom bar to release from the guides.

MATERIALS

The Matadoor® is made of a high strength and tear resistant coated woven polyester fabric. The fabric is attached to a bottom bar that is made up of three sections of back to back angles, held rigid by a steel flat which is fastened across the break points. All steel components are powder coated orange to match the base fabric.

CORNELL
SAFE AND SECURE

Matadoor®
Break-away Curtain Section

Matadoor® in Action

Fork lift crashes through

Matadoor® slips easily back into the guides

Align holes in flats with holes in bottom bar.

Use the fasteners supplied to re-attach the flat.
